

Name: Metropolitan Water District of Southern California Date Printed: 04/25/2019

Posted On: 10/01/2017 Industry: Oil & Gas
Corporate address: 700 N. Alameda Street, California, Los Angeles,

Description

The Metropolitan Water District of Southern California is a regional wholesaler that delivers water to 26 member public agencies - 14 cities, 11 municipal water districts, one county water authority - which in turn provides water to more than 19 million people in Los Angeles, Orange, Riverside, San Bernardino, San Diego and Ventura counties. Metropolitan is governed by a 38-member board of directors who represent their respective member agencies ensuring each member agency is part of the governance of Metropolitan.

To supply the more than 300 cities and unincorporated areas in Southern California with reliable and safe water, Metropolitan owns and operates an extensive water system including: the Colorado River Aqueduct, 16 hydroelectric facilities, nine reservoirs, 819 miles of large-scale pipes and five water treatment plants. Four of these treatment plants are among the 10 largest plants in the world. In fact, Metropolitan is the largest distributor of treated drinking water in the United States. The District imports water from the Feather River in Northern California and the Colorado River to supplement local supplies. It also helps its member agencies develop water recycling, storage and other local resource programs to provide additional supplies and conservation programs to reduce regional demands. Metropolitan currently delivers an average of 1.5 billion gallons of water per day to a 5,200-square-mile service area.

The Dream Comes True The Dream Comes True" is a video history of Metropolitan, including early clips that show the 1928 building of the Colorado River Aqueduct and how the district has evolved to keep pace step with public values such as water reliability, water quality and environmental stewardship. [Internships](#)

Metropolitan has various internship opportunities to train, educate and prepare pre-professionals.

College undergraduates and graduate students will gain practical work experience through a paid temporary job assignment related to their academic/educational field of study. Interns learn about the water industry while applying theories and concepts to "real-world" work situations.
